IF184504 Web Programming
Lecture #2

Basic Web Programming Language

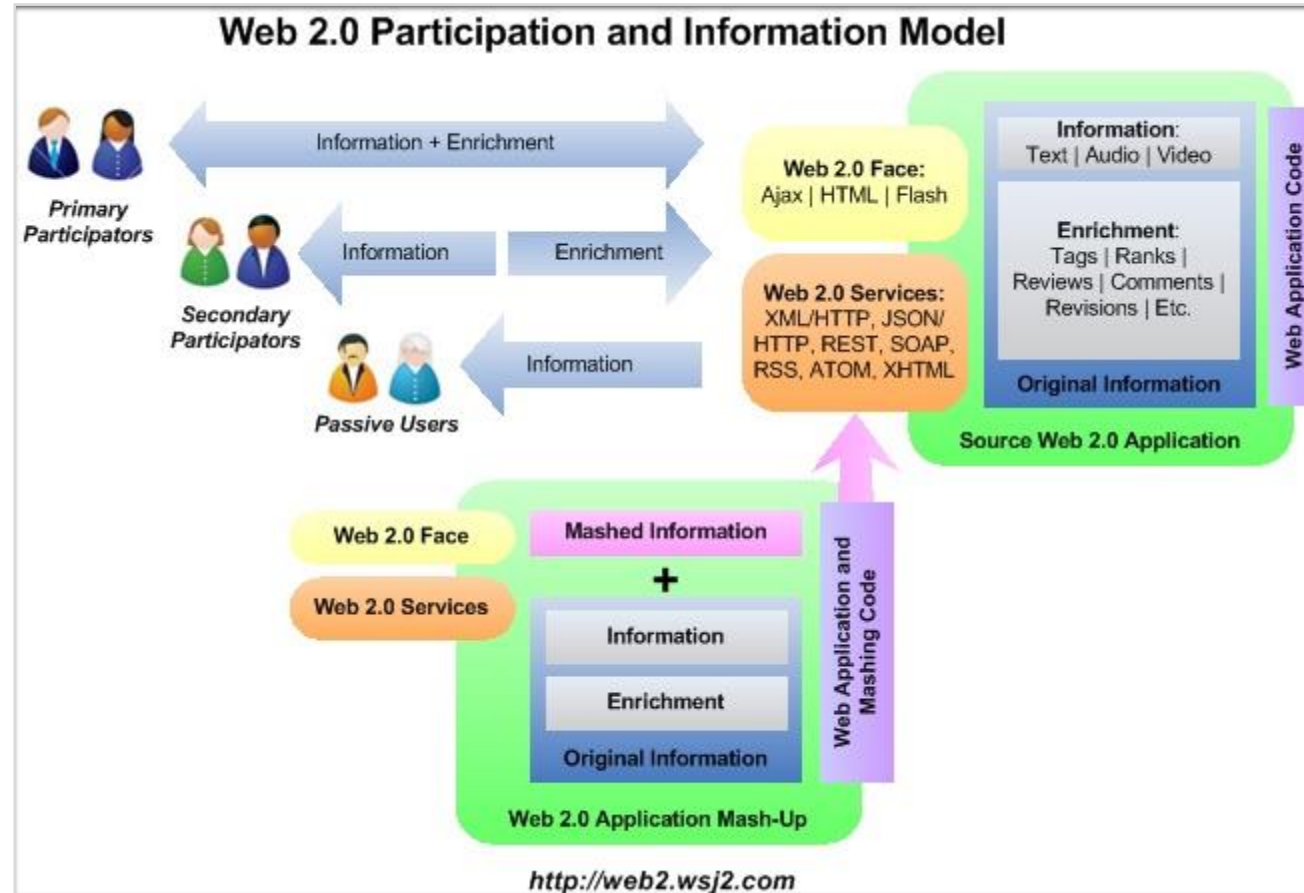

Misbakhul Munir **IRFAN SUBAKTI**

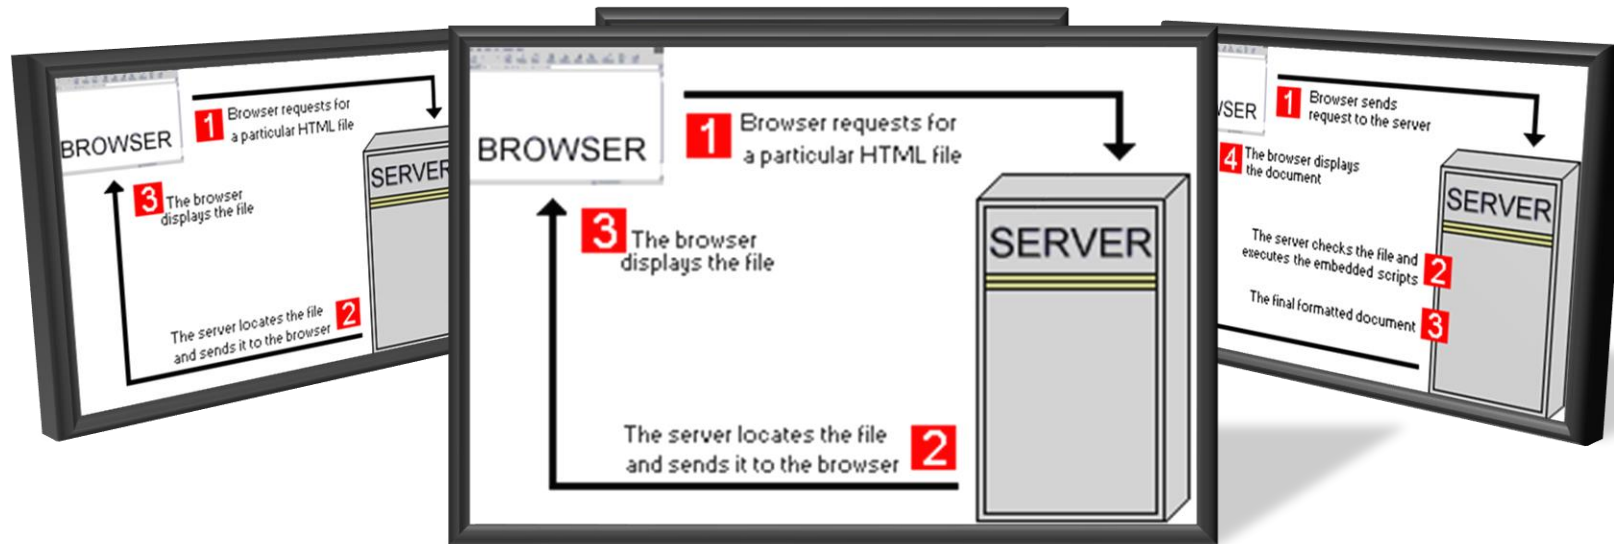

司馬伊凡

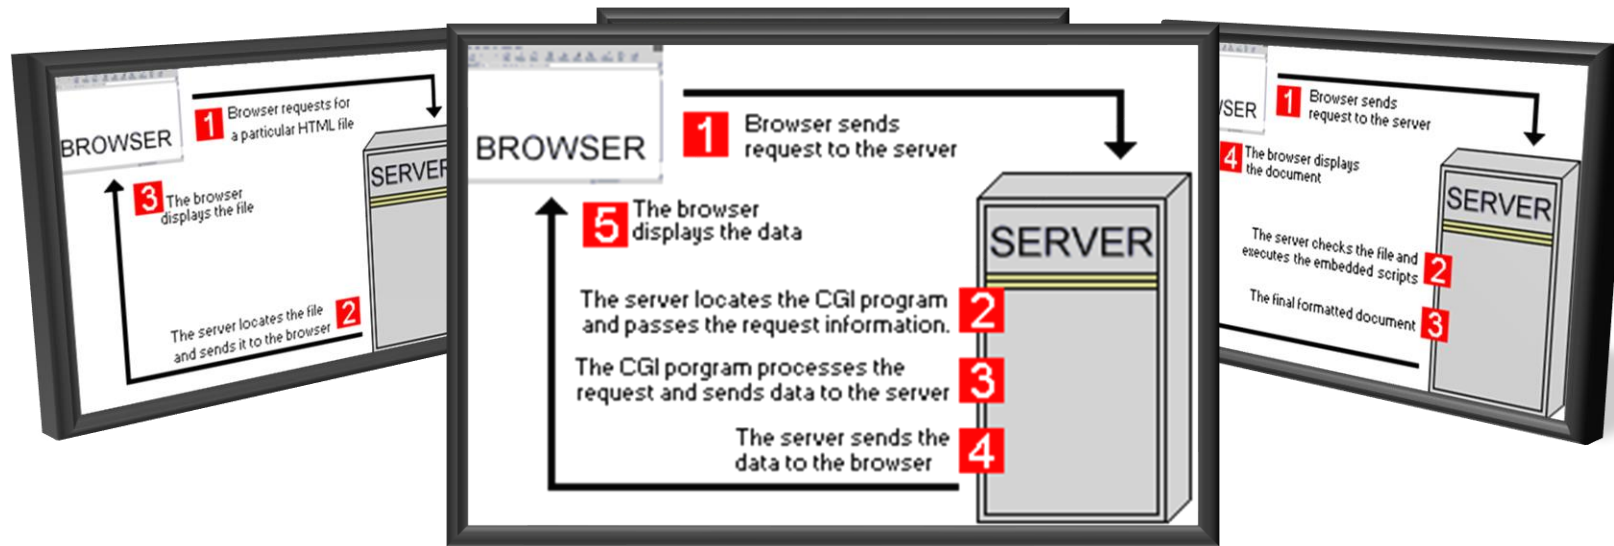

Мисбакхул Мунир **Ирфан Субакти**

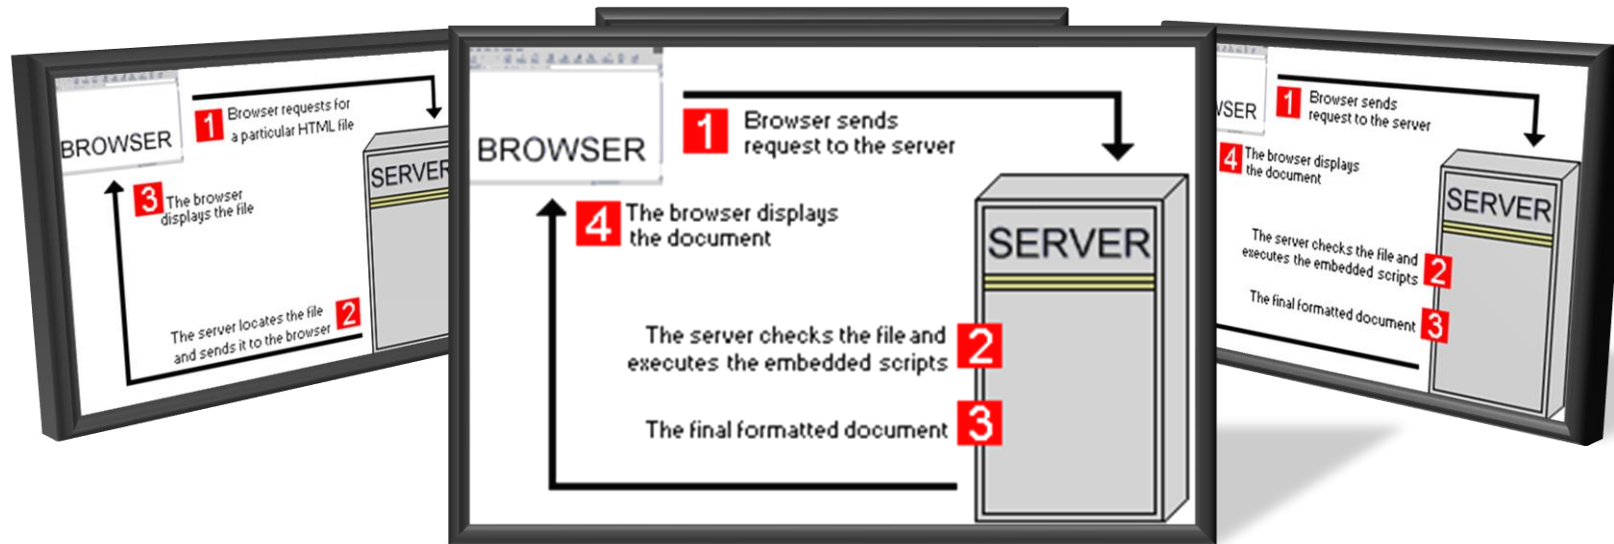

Basic web programming language

- Web's client server: the concept

HTML

It's about **tag**!

HyperText Markup Language (HTML)

- A standard of programming language for showing the web's document
 - Control the appearance of web page & its content
 - Make an online form for enrolment, online transaction
 - Add the objects, e.g., image, audio, video & Java applet in the document

HTML Tools

- Browser
 - Client's installed software for translating HTML tags into web pages
 - E.g., Chrome, Internet Explorer, Netscape Navigator, Opera, Mozilla, etc.
- Editor
 - Program for creating HTML document
 - There are many: Notepad, Notepad++, Macromedia DreamWeaver, Microsoft FrontPage, Sublime Text, Vim, Brackets, etc.

HTML tags

- Programming language → code, HTML → tag
- E.g., <html>, <head>, <title>, <body>, , etc.
- It is NOT case sensitive → <body> is the same as <BODY>

HTML tags (continued)

- General format:

<ELEMENT ATTRIBUTE = VALUE>

- ELEMENT: tag name
- ATTRIBUTE: tag's attribute
- value: attribute's value
- E.g.:

<BODY BGCOLOR=BLUE>

HTML document structure

- HTML document consisting of 3 parts: HTML, HEAD and BODY

```
<HTML>
```

```
    <HEAD>
```

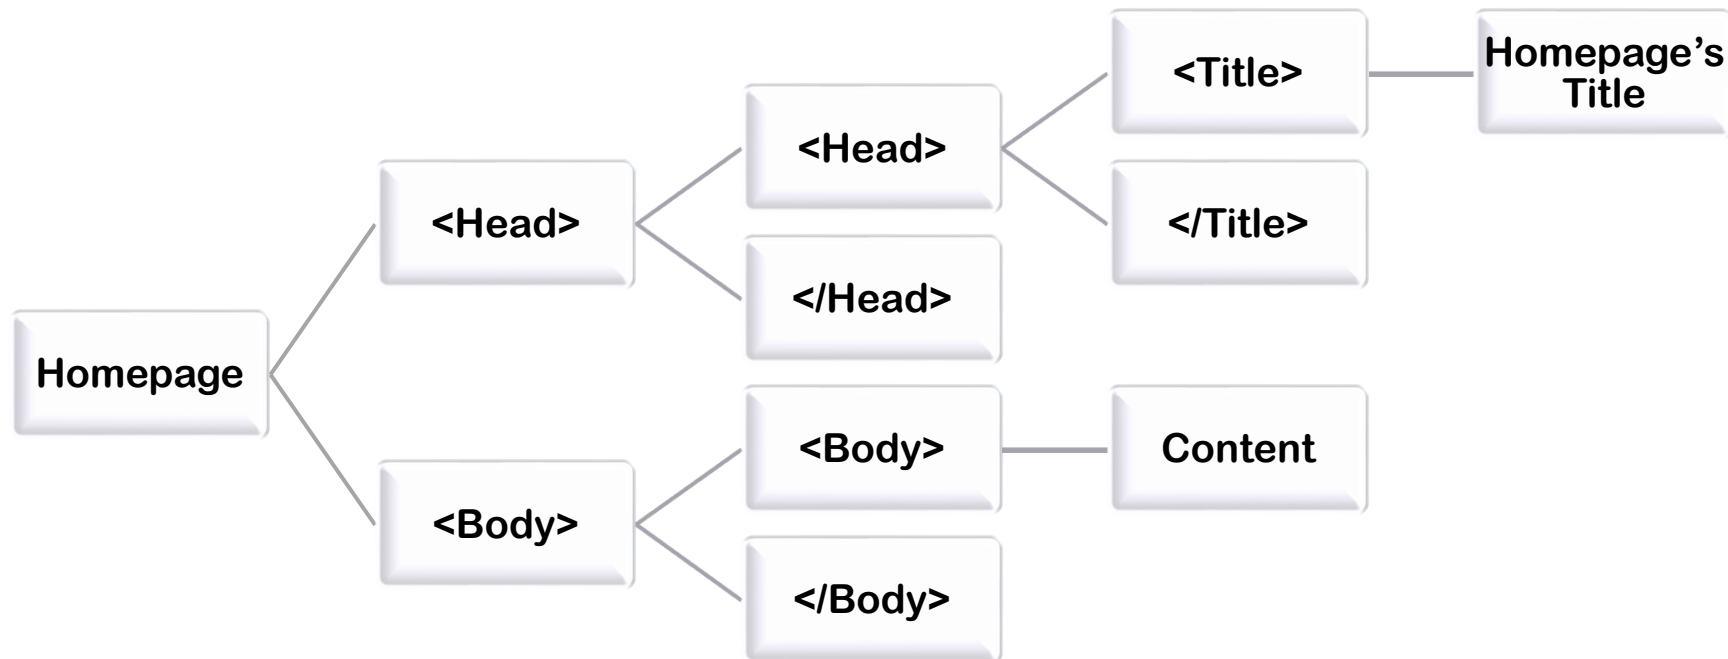

```
    </HEAD>
```

```
    <BODY>
```

```
    </BODY>
```

```
</HTML>
```

HTML structure

<HTML>

- Each HTML document starts and ends by the HTML tag

```
<HTML> ... </HTML>
```

- <HTML> tag tells the browser that anything between these tags is HTML document

<HEAD>

- In this part, usually it has <TITLE> tag for showing the title of web page

```
<HTML>
```

```
    <HEAD>
```

```
        <TITLE>
```

```
        Subakti Family: Russian-Indonesian couple
```

```
        </TITLE>
```

```
    </HEAD>
```

```
</HTML>
```

<BODY>

- <BODY> tag used for showing the text, image link & everything will be shown on web page

```
<HTML>
```

```
    <HEAD>
```

```
        <TITLE>Welcome to my home page</TITLE>
```

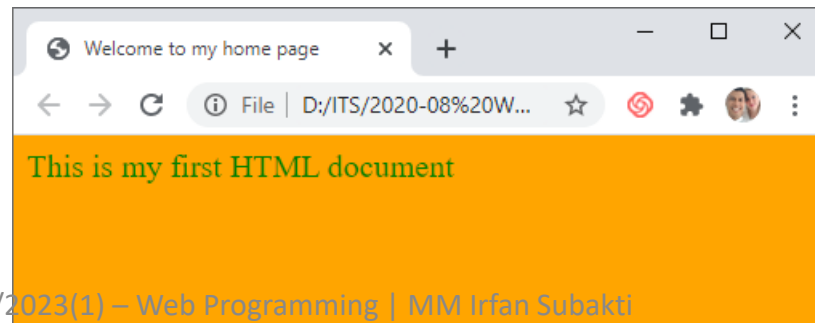

```
    </HEAD>
```

```
    <BODY TEXT="GREEN" BGCOLOR="ORANGE">
```

```
        <P>This is my first HTML document</P>
```

```
    </BODY>
```

```
</HTML>
```

Basic element: Block level

- Block level element: 6 levels, i.e., H1 to H6

<BODY>

<H1>Heading one (H1)</H1>

<H2>Heading two (H2)</H2>

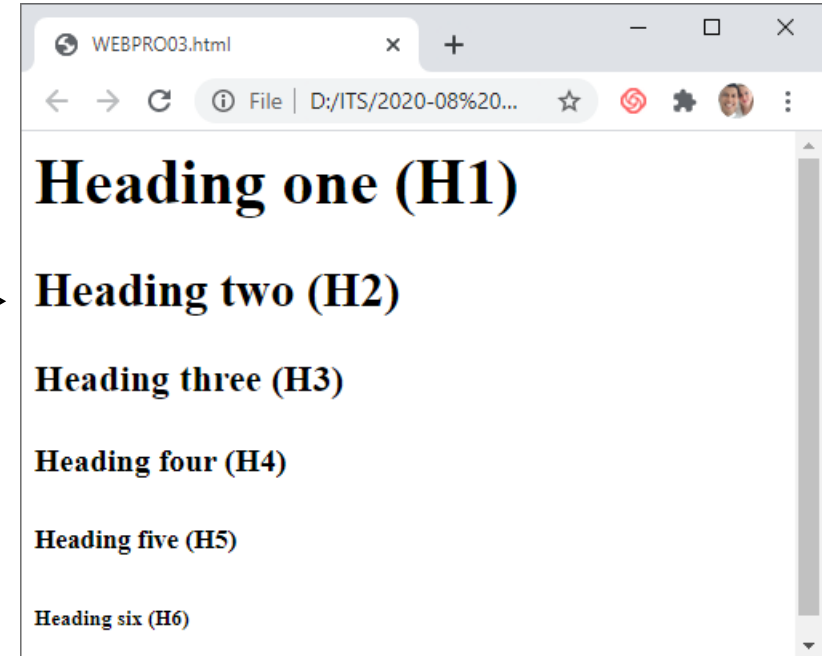

<H3>Heading three (H3)</H3>

<H4>Heading four (H4)</H4>

<H5>Heading five (H5)</H5>

<H6>Heading six (H6)</H6>

</BODY>

Basic element: Paragraph (p)

- Showing the text as a paragraph

```
<BODY>
```

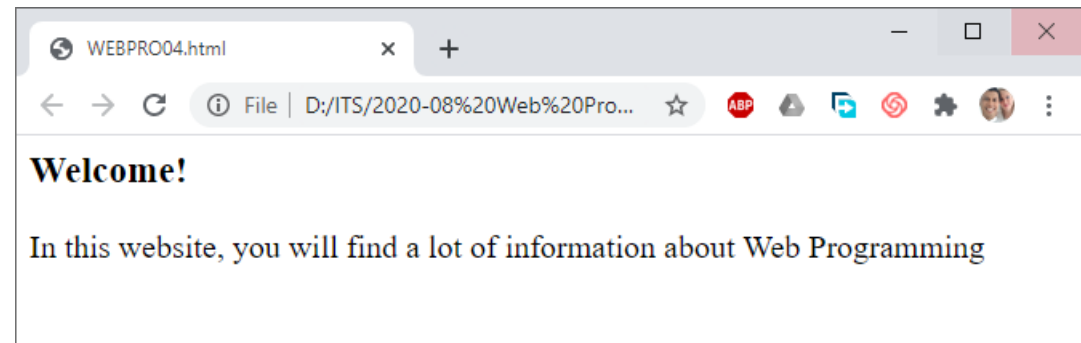

```
    <H3>Welcome!</H3>
```

```
    <P>
```

In this website, you will find
a lot of information about Web Programming

```
    </P>
```

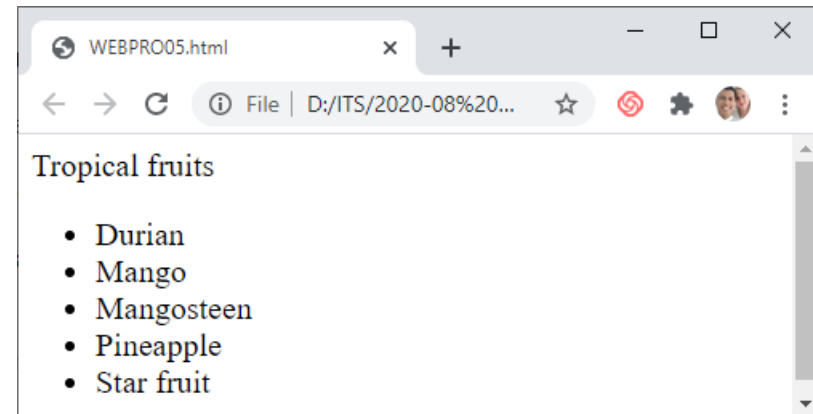

```
</BODY>
```

Basic element: List item (li)

- Unordered list : there's no order of the list (bullet)

```
<BODY>  
  <P>Tropical fruits</P>  
  <UL>  
    <LI>Durian</LI>  
    <LI>Mango</LI>  
    <LI>Mangosteen</LI>  
    <LI>Pineapple</LI>  
    <LI>Star fruit</LI>  
  </UL>  
</BODY>
```

List item (li) - continued

- Ordered list ``: there's an order of the list

```
<BODY>
```

```
  <P>Bumilangit Cinematic Universe</P>
```

```
  <OL start="1" type="1">
```

```
    <LI>Gundala</LI>
```

```
    <LI>Sri Asih</LI>
```

```
    <LI>Godam</LI>
```

```
    <LI>Mandala</LI>
```

```
    <LI>Patriot</LI>
```

```
  </OL>
```

```
</BODY>
```

Basic element: Horizontal rule (hr)

- Horizontal rule tag used to draw the horizontal line in HTML document
- The attributes of <HR>:
 - ALIGN → the location of the horizontal rule, values: CENTER | RIGHT | LEFT
 - WIDTH → the length of the horizontal rule, default value: 100%
 - SIZE → the thickness of the horizontal rule in pixel
 - NOSHADE → the shadowing effect

Horizontal line with height of 30 pixels

Horizontal line with height of 30 pixels and noshade.

```
<HR ALIGN="CENTER" WIDTH=90% SIZE=3 NOSHADE>
```

Page formatting

- BREAK: starting a new line → `
`
- FONT: font format appearance

```
<FONT COLOR="#112255" SIZE=5>Web  
Programming</FONT>
```

- COLOR: the attribute whose 3 colour's categories (RGB)

`#RRGGBB` → `#00FF00` is Green

Page formatting (continued)

- **Alignment: object alignment** → LEFT | RIGHT | CENTER | JUSTIFY

```
<P ALIGN="CENTER"> Web Programming</P>
```

- **Text format:**
 - Physical format
 - Logical format
 - Preformatted text: shows the text as it is

```
<PRE>Web prog: HTML, it's fun, isn't it? </PRE>
```

Physic & Logic

Physical format

Tag	Description
<code> ... </code>	Bold text
<code><I> ... </I></code>	Italic text
<code><U> ... </U></code>	Underline text
<code><BIG> ... </BIG></code>	Bigger than a normal size
<code><SMALL> ... </SMALL></code>	Smaller than a normal size
<code><STRIKE> ... </STRIKE></code>	Strikethrough text
<code><SUP> ... </SUP></code>	Superscript text
<code><SUB> ... </SUB></code>	Subscript
<code><CENTER> ... </CENTER></code>	Center-align text

Logical format

Tag	Description
<code> ... </code>	Emphasized text → displayed in italic <code><I></code>
<code> ... </code>	Strong importance → displayed in bold <code></code>
<code> ... </code>	Been deleted → strike a line through deleted text <code><STRIKE></code>
<code><INS> ... </INS></code>	Been inserted → underline inserted text <code><U></code>

Basic element: Hyperlink (a)

- Create a link to other document

```
<A HREF=contact.html>Contact us</A>
```

```
<A HREF="https://subakti.com">Subakti Family:  
Russian-Indonesian couple</A>
```

- Create a link to the particular part/section in a document

```
<A NAME="coursetopic">Course topic</A>
```

```
<A HREF="#coursetopic">See the course topic</A>
```

Creating table

- Tag for the table: `<TABLE> ... </TABLE>`
- Tag for the cell: `<TD> ... </TD>`
- E.g.

```
<HTML>

  <HEAD>

    <TITLE>Creating Table</TITLE>

  </HEAD>

  <BODY>

    <TABLE BORDER="1">

      <TD>The first cell</TD>
      <TD>The second cell</TD>
      <TD>The third cell</TD>
      <TD>The fourth cell</TD>

    </TABLE>

  </BODY>

</HTML>
```

Creating table (continued)

- Tag for the cell's row: `<TR> ... </TR>`
- Tag for the table's title: `<CAPTION> ... </CAPTION>`
- E.g.

```
<HTML>
  <BODY>
    <TABLE BORDER="1">
      <CAPTION>Creating Table</CAPTION>
      <TR>
        <TD>Row 1 Col 1</TD>
        <TD>Row 1 Col 2</TD>
      </TR>
      <TR>
        <TD>Row 2 Col 1</TD>
        <TD>Row 2 Col 2</TD>
      </TR>
    </TABLE>
  </BODY>
</HTML>
```

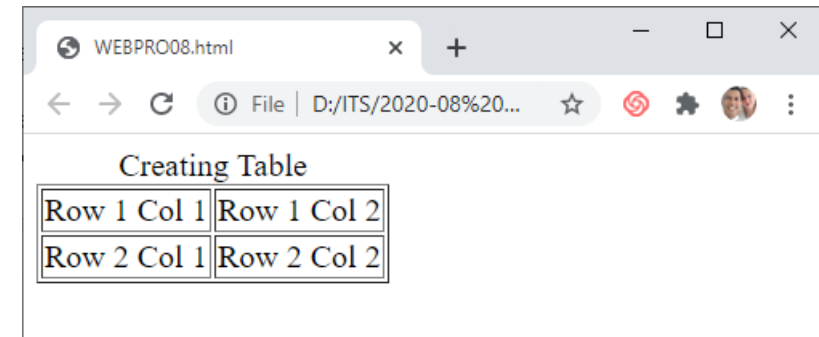

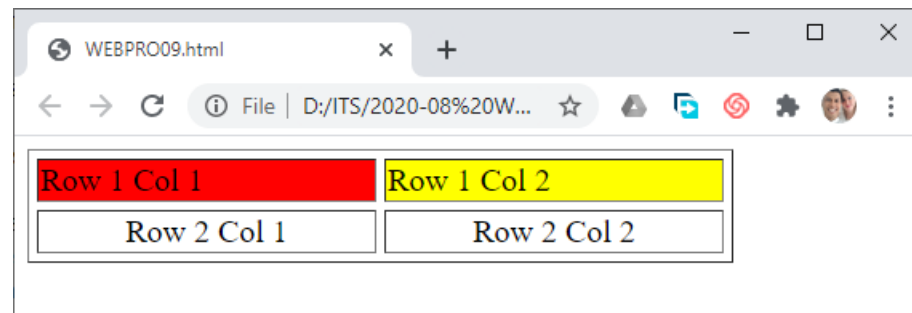

Table formatting

- Table alignment
 - `Align (CENTER, JUSTIFY, LEFT, RIGHT)` → horizontal alignment
 - `VAlign (BASELINE, TOP, MIDDLE, BOTTOM)` → vertical alignment
- Table width: `WIDTH="25%"`
- Cell colour: `BGColor="RED"`
- Table space
 - `CELLSPACING` → space between the cells
 - `CELLPADDING` → space from the border to the text in the cell

Table formatting (continued)

```
<HTML>
  <BODY>
    <TABLE BORDER="1" CELSPACING=5 CELLPADING=10>
      <TR ALIGN="LEFT" VALIGN="TOP">
        <TD WIDTH="25%" BGCOLOR=RED>Row 1 Col 1</TD>
        <TD WIDTH="25%" BGCOLOR=YELLOW>Row 1 Col 2</TD>
      </TR>
      <TR ALIGN="CENTER" VALIGN="BASELINE">
        <TD>Row 2 Col 1</TD>
        <TD>Row 2 Col 2</TD>
      </TR>
    </TABLE>
  </BODY>
</HTML>
```

CSS

Cascading Style Sheet

CSS: About

- CSS: Cascading Style Sheet
- Function: defining the text's style of font, size and colour
- Creating methods
 - Style Sheet Inline
 - Style Sheet Internal
 - Style Sheet External

Style Sheet Inline

- Can be typed directly in HTML tag as an attribute

```
<BODY>
```

```
    <B STYLE="COLOR:BLUE">
```

The bold and blue colour text!

```
    </B>
```

```
</BODY>
```

Style Sheet Internal

- By using the tag `STYLE` inside the tag `HEAD`

```
<HEAD>
```

```
    <STYLE TYPE="TEXT/CSS">
```

```
        ...
```

```
        Style definitions here
```

```
        ...
```

```
    </STYLE>
```

```
</HEAD>
```

Style definitions

- Style definitions are the definitions or the intended style
- The format as in the following

```
SELECTOR {PROPERTY1: VALUE1;  
          PROPERTY2: VALUE2; ...  
          PROPERTYN: VALUEN; }
```

- Selector → the tag used by web browser
- Property → value is the style's effect designated for selector

Style definitions: the example

```
<!-- D:\MySite\stylecss01.html -->
<HTML>
  <HEAD>
    <TITLE>Using CSS</TITLE>
    <STYLE TYPE="TEXT/CSS">
      B {COLOR: BLUE}
    </STYLE>
  </HEAD>
  <BODY>
    <P>This <B>bold</B> text automatically written in a blue colour!<BR>
    Whenever the bold tag is called, it has a <B>blue</B> colour!
  </P>
  </BODY>
</HTML>
```

Style Sheet External

- Save the style's information to a file whose extension/type is .CSS
- Calling the CSS file in HTML by using tag LINK placed in tag HEAD
- By using the tag STYLE inside the tag HEAD

```
<HEAD>
```

```
    <LINK REL="STYLESHEET"  TYPE="TEXT/CSS"  
        HREF="Filename.CSS" />
```

```
    ...
```

```
    ...
```

```
</HEAD>
```

Style Sheet External (continued)

```
stylecss02.css - Notepad
File Edit Format View Help
/* D:\mysite\stylecss02.css */
H1, H2, H3, H4 {COLOR : BLUE;}
H1 {FONT-SIZE : 18pt;}
H2 {FONT-SIZE : 16pt;}
H3 {FONT-SIZE : 14pt;}
H4 {FONT-SIZE : 12pt;}
P {FONT-SIZE : 10pt;}
```

```
stylecss03.html - Notepad
File Edit Format View Help
<!-- D:\MySite\stylecss03.html -->
<HTML>
  <HEAD>
    <LINK REL = "STYLESHEET" TYPE = "TEXT/CSS"
      HREF = "stylecss02.css"/>
    <STYLE TYPE="TEXT/CSS">
      B {COLOR: BLUE}
    </STYLE>
    <TITLE>Using CSS</TITLE>
  </HEAD>
  <BODY>
    <H1>Header 1</H1>
    <H2>Header 2</H2>
    <H3>Header 3</H3>
    <H4>Header 4</H4>
    <P>This <B>bold</B> text automatically written in a blue colour!<BR>
    Whenever the bold tag is called, it has a <B>blue</B> colour!
    </P>
  </BODY>
</HTML>
```

Style Sheet External (continued)

```
<STYLE TYPE = "TEXT/CSS">
```

```
    HR {COLOR:RED; HEIGHT:5PX; WIDTH:50%; }
```

```
</STYLE>
```

- **Description**

- **Tag** → STYLE
- **Attribute** → TYPE = "TEXT/CSS"
- **Selector** → HR
- **Property** → COLOR, HEIGHT, WIDTH
- **Value** → RED, 5PX, 50%

Colour list

 black = "#000000"	 green = "#008000"
 silver = "#C0C0C0"	 lime = "#00FF00"
 gray = "#808080"	 olive = "#808000"
 white = "#FFFFFF"	 yellow = "#FFFF00"
 maroon = "#800000"	 navy = "#000080"
 red = "#FF0000"	 blue = "#0000FF"
 purple = "#800080"	 teal = "#008080"
 fuchsia = "#FF00FF"	 aqua = "#00FFFF"

ID Selector and CLASS

- ID Selector can be defined by ourselves
 - Started by the symbol **#** (octothorpe)
- CLASS is started by the symbol **•** (period)

```

```

JavaScript

Building the webpage, interactively

JavaScript: Introduction

- A script-based language which can be run on HTML document
- 4 December 1995, during a collaboration between Netscape and Sun Microsystems (Java developer) → Netscape gave a name to this language: JavaScript
- On the other hand, Microsoft had been trying to adapt this technology into its own browser, Internet Explorer 3 → they called it: JScript

Comparison

Java Script

- Client-side programming
- Compiler: browser
- Developer: Netscape
- The code can be seen in HTML document
- Integrated within HTML document

Java

- Server & client programming
- Compiler: JVM
- Developer: Sun Microsystems
- The code (Applet) cannot be seen in HTML document
- Separated from HTML document

JavaScript: the ability

- Response to events
- Read and write HTML elements
- Validate the data
- Detect the browser's visitor
- Create the cookies

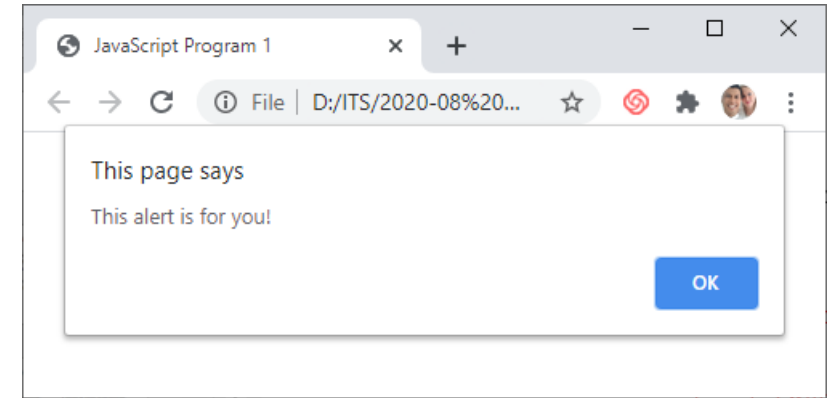

JavaScript: HTML document inside

- `<SCRIPT>` tag
 - Usually `<SCRIPT>` inserted between `<HEAD>` and `</HEAD>`
 - Calling the JavaScript function (it calls **event**) inserted between `<BODY>` and `</BODY>`
- External file

```
<SCRIPT LANGUAGE = "JavaScript" SRC = "url/file.js"
</SCRIPT>
```
- Event
 - Event is an action done by user → click a mouse
 - `<tag eventName = "JavaScript code will be inserted ">`

Alert: the example

```
<HTML>
  <HEAD>
    <TITLE>JavaScript Program 1</TITLE>
  </HEAD>
  <BODY>
    <SCRIPT LANGUAGE = "JavaScript">
      <!--
        alert("This alert is for you!");
      // -->
    </SCRIPT>
  </BODY>
</HTML>
```

Prompt: the example

```
<HTML>
```

```
  <HEAD>
```

```
    <TITLE>Data Input</TITLE>
```

```
  </HEAD>
```

```
  <BODY>
```

```
    <SCRIPT LANGUAGE = "JavaScript">
```

```
    <!--
```

```
        var name = prompt("What is your name?");
```

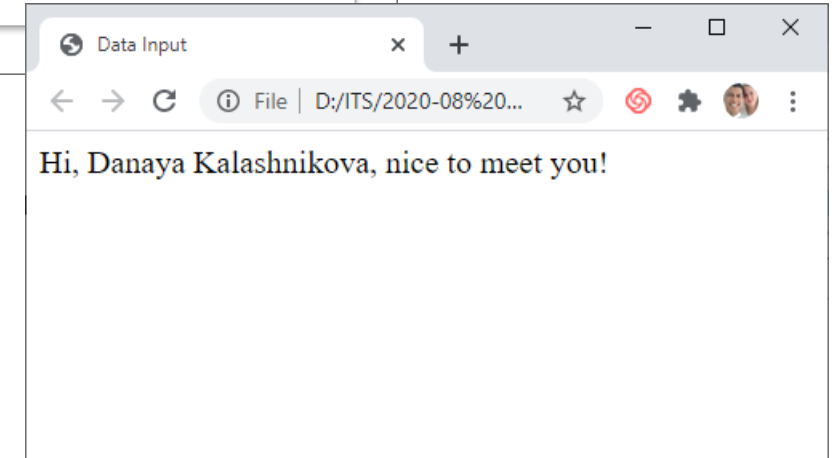

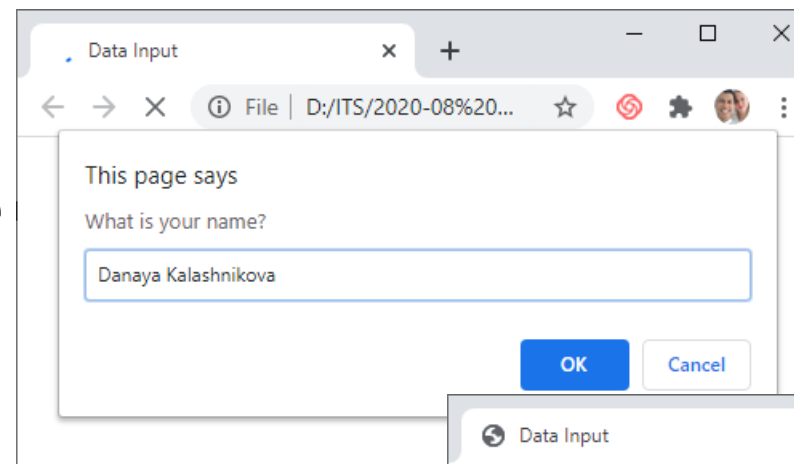

```
        document.write("Hi, " + name + ", nice to meet you!");
```

```
    // -->
```

```
    </SCRIPT>
```

```
  </BODY>
```

```
</HTML>
```

Interactive form: the example

```
<SCRIPT LANGUAGE = "JavaScript">
    function mySearch() {
        var key = document.fSearch.keyword.value;
        var result = https://www.google.com/search?q= + key;
        window.open(
            result, 'google', config =
            'height=500, width=750, scrollbars=yes location=yes'
        )
    }
</SCRIPT>

<FORM NAME="fSearch" onSubmit="mySearch()">
    Search by using Google:
    <INPUT NAME="keyword" SIZE="40" TYPE="text">
    <INPUT TYPE="submit" VALUE="Search">
</FORM>
```
